Ref	Project title: Capacity Building for Blended Learning in Poultry Production				
Name of legal entity	Country	Client	Budget, €	Starting date	End date
AERES MBO	Indonesia	Nuffic (Innocap)	€ 250.000	01-10-2017	30-09-2019
Project description					
The project focuses on the first priority area (staff development) and will spend most resources in teacher education, didactics and curriculum adaptation and in adding e-learning as an innovative delivery method to build a blended learning system.					
The second aim is to increase the effectiveness of practical training facilities for poultry production by adding data acquisition and data processing options, and enable access to these data by smartphones. This aim is supportive of the first aim, and enables collaboration with Indonesian and Dutch private parties.					
Services rendered					
The project has a dual aim: developing the capacity of the SMK's to build innovative praxis-oriented curricula in poultry production, and adding intelligence to poultry training facilities/teaching factories by data collection and data processing, to be used as references in the updated curricula. By introducing effective forms of e-learning on a smartphone platform students and graduates get easy access to relevant contents, even off-campus, and will be able to directly communicate with teachers and industry experts. Addition of exercises will result in a highly effective blended learning system. Updated curricula with added effectiveness of practical training will deliver graduates capable of a better poultry production, thus contributing to regional economic development. Added awareness of food security and food safety will contribute to public health.

Aeres	Myanmar	Ministry of Economic Affairs, (RVO) Larive	Tog@there project(s) Total budget (training and equipment): € 500.000	September 2016	September 2018
Project description					

The programme consists of development of the poultry chain in Myanmar, investments in equipment (hatchery, farm management and slaughtery equipment) and a training programme. AERES will be involved in curriculum development, training and education in the following issues:

1. Public level: Poultry health & disease control.
2. Farmer level: Poultry health & disease control.
3. Feed formulation & feed mill efficiency.
4. Poultry farm management.
5. Breeder & hatchery management.
6. Food safety (Public): Institutional change.
7. Food safety (Private): Demonstration slaughterhouse(s).

Target groups: poultry farmers, (para)veterinarians, managers and operators of feed mills.

Services rendered

Curriculum development, training programmes on poultry, consultancy on implementation of small scale equipment

Ref	Project title: Sustainable and Affordable Poultry for All (SAPA)				
Name of legal entity	Country	Client	Budget	Starting date	End date
Aeres	Myanmar	Ministry of Economic Affairs, (RVO) De Heus & Belga broed Myanmar Fresh Studio, Vietnam. Yezin University and Myanmar livestock federation	Sustainable Entrepreneurship and Food Security Facility (FDOV) project(s) Total budget (training and equipment): € 5.000.000	April 2015	April 2020
Project description					

Improve food security and rural incomes of smallholders in Myanmar, through the introduction of more productive and sustainable farming practices for poultry and corn production. This will result in lower cost prices and productivity gains, making poultry more affordable, and as the major source of animal protein in Myanmar, contribute to food security.

The project targets the most important source of animal protein in Myanmar: poultry. Besides its crucial role in food security, poultry production requires little land and is labour intensive. More productive, profitable and sustainable smallholder broiler farms can play a key role to create jobs in the rural areas and produce more affordable protein. To achieve this, the following interventions will be executed:

- To reduce the current unstable supply of Day Old Chicks (Doc) and provide farmers more possibilities to independently choose which Doc's and feed they want to buy, a professional hatchery which will be setup to provide more than 7 million Doc's per year.
- Enhance the capacity of 250 broiler farmers to professionally manage their farm: reduce chicken mortality, reduce the use of antibiotics and increase the efficiency of feed. This will be done by setting up a poultry training centre which will offer a professional broiler farm management training courses and Training of trainers (ToT).
- This will increase the domestic supply of chicken meat with 18 million kg per year, which will be equivalent to the annual consumption of 1 million people.
- Improve the productivity and sustainability of corn production, as corn is the main cost element of poultry feed. This will be done by developing a team or farmer corn advisors, running training programs and demonstration trials in the corn areas to train 2,500 corn farmers, from whom the project will buy the corn.
- Overall direct created value by the project: US\$ 40 million per year, or US\$ 160 million over the total project period.
- Directly generated income: 6,700 people per year• The project will institutionalize those broiler farmers who are dedicated to produce in a safe and sustainable way, by forming a farmer club. The farmer club will act as a platform for knowledge sharing among farmers, linking farmers to buyers, and undertake joint sales and marketing activities.

Services rendered

Curriculum development, training programmes on poultry (broilers and hatchery) , setting up practical training centres and Training of Trainers (ToT)

Ref	Project title: Broiler farm management West Java and Sulawesi Indonesia

Aeres - PTC ⁺	Indonesia	Ministry of Economic Affairs, (RVO) Larive (lood tech Indonesia, Ministry of Agriculture in Indonesia	K2K project € 150.000	January 2015	January 2017
Project description					
<p>With selective training and relatively small scale investments in stall equipment (closed water and ventilation systems), open house farmers can be learned and shown how to improve their activities and realise better (financial) results. AERES (in cooperation with van Eck Industrial hygiene) executes a training programme for open house broiler farmers in West java and Sulawesi. Small scale stall equipment will be implemented upon the needs of local farmers. Main issues of the training are:</p> <p>Stall equipment (poultry house design, water supply, housing & ventilation) Applied management (monitoring of flock, litter management)</p>					

Services rendered
Curriculum development, training programmes on poultry, consultancy on implementation of small scale equipment

Ref	Project Title : Myanmar Potato Value Chain – capacity building				
Name of legal entity	Country	Client	Budget €	Starting date	End date
Vilentum applied University , Dronten	Myanmar	Ministry of Economic Affairs	50 %	01-12-2015	31-12-2016

Description of the project

The development of a more sustainable potato value chain in Myanmar. This project focusses on the potato production itself by enforcing the expertise of professionals active in and around the potato production and by training farmers. This professionalization will be supported by making pertinent knowledge available as well through internet as in written forms in the Myanmar language. The professionals will also be trained to train farmers thus ensuring that the acquired knowledge will be transferred to farmers.

By investing in the professional network and through that in the training of large group of famers it is the crop production methods in practice will improve quickly, as basis for a substantial improvement in productivity and product quality. Increased productivity and rational inputs will lead to a lower cost prize.

Building up capacity in the professional networks is also an investment in the future, this network can contribute greatly to further sustainable development of the potato chain. A core team so to speak

Services rendered

To execute the capacity building training program for the potato value chain professionals, the following activities are foreseen:

Select key area geographical where to work,

Select professionals to be trained,

Implement demo fields with lead farms,

Design content and set up of course,

Implement training course,

Evaluate training course,

Make available knowledge and training material accessible in an electronic library.
